About
Company needs internal service for its' employees which helps them to make a decision on lunch place. Each restaurant will be uploading menus using the system every day over API and employees will vote for menu before leaving for lunch.

Requirements for implementation:
- There should be an API for:
    - Creating restaurant
    - Uploading menu for restaurant (There should be menu for each day)
    - Creating employee
    - Getting current day menu
    - Voting for restaurant menu
    - Getting results for current day
- Automated tests
- Solution should be uploaded to version control
- Solution should be built with Django/Flask
- Sufficient logging must be implemented
